INVENTOR:

Green , Paul Bernard...

...ABSTRACT data flow controller comprises two buffers 20 and 22 and a control element 24 for **checking** for predefined temporal constraints between items of data and for only allowing items of data...

...SPECIFICATION the location in the buffer 20 that the data 32 should be stored in. A **check** sum 34 is provided in order to ensure that corruption has not occurred within the address field or data field of the transmitted data. Provided a **check** sum as calculated by the buffer 20 when it receives the address and data information 30 and 32, respectively, matches the **check** sum 34 then it can be assumed that no corruption has occurred and the data...

...be of practical benefit for large data buffers.

A further problem may arise if a **check** sum test is failed. It will
~~then not be possible to determine whether the data~~

**Online check management system for goods purchase, provides payments
for authorized check and indemnifies for returned check based on
specific condition**

Inventor: **GREEN P H** ...

... **LABADIE T S**

Abstract (Basic):

... The statistical information and the image of the **check**
transmitted from a merchant are stored in the database of a service
provider. The payments of the authorized **check** is provided to the
merchant by an automatic clearing house (ACH) system of the service
provider. In case of returned **check** , for a guarantee' customer, the
merchant is indemnified, based on specific terms and conditions.

... For managing payment of **check** for purchasing of goods or goods
or services through Internet...

...The figure shows an explanatory view of the online ~~check management~~
system...

Title Terms: **CHECK** ;

Detailed Description

... on a touchscreen, and other appropriate ways.

Electronic funds transfers also take place over the **Internet**. To complete such a transaction, a customer or his designee typically types in his **debit card** or bank account credit card number, and other verification information, such as the expiration date of the card, the customer's address, **phone number** and possibly a PIN. This information is the encoded and transmitted over the World Wide **Web** to the appropriate location. There are also other types of electronic funds transfers. For example...

...therein. The memory records pertinent information for the 10 last transaction, such as an **account number**, balance, available funds information, etc. The card is placed inside or near a smartcard reader that is capable of extracting the information as necessary while POS devices, **internet** browsers and smartcards may readily be used with the invention, any system or device that is capable of transmitting unique merchant and **customer identification** information to a clearinghouse for verification and settlement may be used.

15 Referring now...

Abstract: In mid-September (1996) there was a flurry of angry email messages flying around the **Internet**, discussing the news that personal information about you could be purchased from the company by...

... alias name, current and two most recent previous addresses, month and year of birth, and **phone number**. When the product first came out, it included **Social Security numbers** as well, but that feature was pulled less than two weeks after the product's initial release. However, if you have a **Social Security number**, you can still search the database (for a fee, of course) for related data. Compared...

~~...made it clear that much personal information is unknowingly gathered and~~
used. Several journalists reported **checking** personal information in P-Trak, and most found erroneous information. This raises another issue: what inaccurate personal information is floating around in **cyberspace** and what effect might that have?.

Title: 1988: year of the debit card

Abstract: The American Bankers Association has released guidelines for all facets of **online debit card** usage including physical card

characteristics, **customer identification**, backup and recovery procedures and security. Flexibility of these guidelines is vital to ensuring their...

...possible number of retailers and financial organisations. The guidelines were structured to be compatible with **online ATM network** environments. Customers will use a PIN format rather than a signature, and if available may...

DENMARK: PAYMENT SECURITY ON THE **INTERNET**

Berlingske Tidende (XSL) 18 Sep 1997 p.7

Language:--DANISH--

DENMARK: PAYMENT SECURITY ON THE **INTERNET**

Within the next few months, the first Danish **Internet** shops which use a credit card system developed by SelfServe Scandinavia are expected to open. Jesper Bo Jensen, marketing director of SelfServe, says the security system guarantees that these **Internet** shops will not lose money. All **account numbers** will be **checked** by the British National Westminster Bank, which also will cash the transactions. In the end...

New on-line payment processing services offered.

CATALOG AGE May, 1987 p. 121

TJ Little and Company (Nashua, New Hampshire) has introduced the
TransNet **on - line credit checking** service. The comprehensive **payment**
processing service collects orders from various sources, authorizes credit
card sales and puts the order...

... one month or more before receiving complete information about
chargebacks. The service also checks customers' **account numbers** and
determines if enough credit exists to cover the sale. The service presently
handles transactions...

M2 PRESSWIRE-31 January 1997-NCR: Smart & Final selects NCR to upgrade POS system to open, NT-based platform (C)1994-97 M2 COMMUNICATIONS LTD

RDATE:290197

Smart & Final, the largest warehouse grocery chain in the United States, has selected NCR to upgrade their stores' point-of-sale system to an open, NT-based system that will improve customer service and offer flexibility to address future business needs. NCR will replace Smart & Final's current checkout system with NCR's retail POS terminals, peripherals and NCR's Advanced Checkout Solution store automation software.

"We chose NCR because of our strong ten-year relationship and their commitment to deliver the most advanced, end-to-end, NT-based POS solution. Advanced Checkout Solution (ACS) will easily integrate into our retail store environment," explained Robert Graham, Smart & Final's director of store systems. "And, the NT platform will enable us to take advantage of the vast array of off-the-shelf applications, reducing application development costs."

"We believe the new system will revolutionize POS processing in our industry much in the same way Intel and Microsoft have revolutionized the power of home computing," Graham said.

To support high availability for Smart & Final's electronic payment and online check authorization system, NCR and Plourde Computer Services, Inc. have partnered to integrate PaymentMaster electronic payment software with NCR's store automation software.

"As the leading provider of NT solutions to the food industry, NCR is helping Smart & Final to better serve their customers by introducing the next generation POS checkout system and better integrated store technology," said Frank Farrell, NCR vice president, Retail Systems, The Americas.

Initial installation will begin in April in a Los Angeles-area Smart & Final store. The new checkout system will include NCR's PC-based POS terminals with graphical, color DynaKey displays, bi-optic scanners, electronic signature capture terminals, thermal printers, servers, systems and support services, and NCR's Advanced Checkout Solution store automation software with enhanced electronic payment functionality, on an NT platform.

ACS is an end-to-end store automation application developed specifically for checkout environments and designed around open systems architecture and technology. Available for both UNIX and Windows NT environments, ACS allows grocers to easily add on more advanced NCR technology, including POS terminals and peripherals and other hardware and software platforms. ACS extends the versatility of NCR's Advanced Store platform for grocery chains, hypermarkets, drug stores and warehouse clubs. Currently, the store automation platform supports six checkout applications and is installed in more than 2,000 customer sites.

Smart & Final Headquartered in Los Angeles, Smart & Final operates more than 170 non-membership warehouse grocery stores in California, Arizona, Nevada, Florida and Mexico. The company also operates two food service distribution businesses located in South Florida and Northern California.

NCR NCR Corporation's computer systems, store automation, banking

systems, consulting and support services are used by customers in more than 130 countries around the world.

NCR's Retail Systems Group, headquartered in the greater Atlanta, Ga. area, is a leading provider of store automation and data warehousing solutions to retailers worldwide.

THE CHECKFREE WALLET ENABLES SECURE INTERNET PURCHASES

DATE: April 10, 1995

20:02 EDT

WORD COUNT: 959

COLUMBUS, Ohio, April 10 /PRNewswire/ -- Checkfree Corporation, the nation's leading provider of electronic payment services, announced today that it has developed a secure, inexpensive and easy-to-use Internet transaction product called The CheckFree Wallet(TM).

Available to users of the World Wide Web, the fastest-growing segment of the Internet, The CheckFree Wallet enables consumers to purchase goods and services from on-line merchants in a safe, convenient and familiar manner. Initially, purchases may be paid for by major credit card. Eventually, The CheckFree Wallet will accommodate electronic checks as well.

Unlike current Internet payment schemes, The CheckFree Wallet does not require prior registration with merchants. Nor does it mandate pre-conversion of funds to proprietary (and potentially illiquid) "electronic cash." And on-line shoppers pay no fees or transaction service charges with the safe, convenient product.

"The CheckFree Wallet is as easy to use as an ATM," says Pete Kight, founder and CEO of Checkfree. "It provides a unique and much needed service to consumers and merchants alike. And best of all, The CheckFree Wallet does not require anyone to alter the way they now do business."

Shopping on the Web

Just as they do in an actual mall, on-line consumers can browse the thousands of electronic storefronts now established on the World Wide Web. After viewing merchandise and making selections, consumers pay for purchases as they leave each store. Most merchants accept all major credit cards. Electronic checks, which will be added to The CheckFree Wallet in coming months, will enable shoppers to pay for purchases with funds from their checking account at any U.S. financial institution.

The CheckFree Wallet system takes the place of a clerk at an actual mall and/or an operator at a telemerchant. Instead of handing a plastic card to a clerk or reading an account number and expiration date over the phone to an operator, the on-line shopper enters an alphanumeric password to open an on screen wallet and select an available payment option. After reviewing order information, such as size, color, quantity and cost of goods, the on-line shopper clicks a "pay" button to complete the transaction.

At the point of purchase, the customer's order is transmitted to the merchant for fulfillment. Because their shipping address and other information are already encrypted and stored in The CheckFree Wallet, shoppers do not have to fill out lengthy order forms every time they make a purchase or visit an electronic storefront.

Payment instructions are transmitted to Checkfree for decryption,

authorization and processing. Once a payment is authorized, funds are debited from the customer's credit card (or, soon, checking) account and credited to the merchant's account -- the very same steps that occur in a face-to-face or telephone transaction.

"The beauty of this system is that neither the merchant nor the shopper is forced to learn new payment methods," says Kight. "The CheckFree Wallet enables retailers and their customers to use their familiar payment instruments, checks and credit cards, with complete security and absolute convenience in the new and exciting on-line marketplace."

Cooperatively Developed

The CheckFree Wallet was developed cooperatively by Checkfree; Spyglass Inc., licensor of Enhanced Mosaic(TM), a leading Web browser; Tandem Computers; and Virtual Open Network Environment Corp. (V-ONE), a leader in Internet security systems.

The CheckFree Wallet is now being integrated into the Spyglass Enhanced Mosaic(TM) browser version 2.1, which will be available this summer. Merchant servers must be Checkfree-enabled to accept payments. Server enabling software will be readily available this summer.

Open System

The World Wide Web Consortium is currently reviewing a standard for transaction protocols. The CheckFree Wallet integrates easily into HTML browser packages, HTTP-D server systems, and existing retail order and fulfillment systems. Checkfree's mission is to create an open, affordable system for Internet transactions. To that end, The CheckFree Wallet accommodates all existing standards, and will also incorporate all emerging standards adopted by the World Wide Web Consortium (W3C) as they become finalized.

Application Program Interface (API) information and technical specifications for The CheckFree Wallet will be available on the Checkfree home page ~<http://www.checkfree.com> beginning in May.

Web Merchants

With an estimated two million people now browsing, the World Wide Web is already as popular as the leading commercial on-line service, and its popularity is skyrocketing. Though on-line merchants rang up sales of \$200 million last year, one expert, Richard K. Crone, senior analyst for Peat Marwick in Los Angeles, predicts sales will top \$1 billion within a year. By the end of the decade, Crone expects between 10 and 25 percent of the world's products to be bought and sold on-line.

About Checkfree

In 1994, Checkfree Corporation processed more than \$6 billion in payments for consumers and corporate clients, with more than one million businesses benefiting from its services. Headquartered in Columbus, Ohio, the privately held company employs 370 full-time associates. Checkfree was founded in 1981.

Current Checkfree electronic bill payment licensees in the personal computer software and electronics industries include Block Financial Software, Computer Associates, Intuit and SmartPhone Communications.

Financial institutions/organizations served by Checkfree Corporation include MasterCard International; Chemical Bank of New York; Centura Bank; Signet Bank; Wells Fargo; Chevy Chase Bank; Comerica; Crestar; Space Coast Credit Union; First Interstate Bank; Dearborn, (MI.) Federal Credit Union; IBAA; Prodigy's Bill Pay USA Service; and USAA.

Corporations served by Checkfree's commercial services division include CompuServe, GENie, Delphi, Reality Technologies, PSI/Pipeline, NetCom, Spry, Optigon, Cellular One and a host of other companies involved with interactive, mobile communications, and Internet access services.

FourGen Software, Inc. 115 N.E. 100th Street Seattle, WA 98125 PHONE: (800) 333-4436, (206) 522-0055 FAX: (206) 522-0053 COMPANY STATEMENT: FourGen can help your organization achieve ECR through improved inventory management. FourGen's Supply Chain Management applications are part of the total client/server business solution provided by FourGen Enterprise, which enables you to modify your software as quickly as your business needs change. Utilizing technologies such as RF scanning, FourGen's integrated inventory management applications help you create continuous replenishment and paperless warehouse environments. FourGen's Inventory Control application offers features to support multiple-node distribution systems. Material is identified by condition and purpose, ensuring that only top-quality merchandise is available for sale and non-conforming material is properly managed. It can cross reference UPCs and SKUs, with management by category and department. RF terminals reduce paper to the minimum, increase productivity and, with real-time editing, improve database accuracy. FourGen's Inventory Replenishment application provides precise inventory and purchasing information, maximizing inventory usage with minimum investment. It supports multi-node distributions systems with inter-warehouse transfers. A flexible calculation engine enables users to customize calculations for usage rate, order point, line point, and order quantity. It provides usage tracking, replenishment scripts, exception processing, and reporting, and generates purchase requisitions from adjusted buy recommendations. FourGen Enterprise has proven installations at Fortune 1000 sites.

COMPANY DESCRIPTION: Off the Wall is a retail interior design and manufacturing firm with a proven track record in the supermarket industry. We are unique in that we design for some clients, manufacture for others and do both for yet others. We create exciting layouts, beautiful color schemes, custom graphics, functional cabinetry and product enhancing lighting. Consequently our stores are pleasing places to shop. Our clients' efforts are rewarded with higher sales per square foot and a growing base of satisfied customers. DESIGN SPECIALIZATION: As designs become finalized, they are transformed into colored renderings. Our architectural job sets are executed on AutoCAD, our graphics and signing on Corel Draw. Layouts, floor finish plans, wall elevations, detail sections, reflected ceiling plans and lighting plans are created with proficiency and can easily be integrated into bid sets. MANUFACTURING CAPABILITIES: We offer high quality silk screening, metal work and wood working including signs, banners, awnings, checkout lights and cabinetry. Our recently expanded manufacturing facility allows us to produce decor in an extremely efficient operation. This results in the best pricing within the industry.
